New Policy Adopted To Enlarge Scope of Provincial Seed Fair

Instituting a new policy calculated to enlarge the scope of the annual Provincial seed fair, Hon. W. N. Chant, minister of agriculture, has announced that the seed fair will now be reorganized to provide three district fairs for the province, instead of a central fair at one point only. These three fairs, it has been decided, will be held at Lethbridge, Calgary and Grande Prairie. A provincial championship in each class will, however, be provided for, by arranging that the first prize winners in each of the district fairs will be permitted to compete in a championship contest at the district fair last to be held, which this year will be at Calgary. As prizes for the championship classes, the first prize monies in each class will be duplicated.

The division of the provincial event into three district fairs will, it is felt, bring the benefits of the project closer to the farmers, and provide an opportunity for a greater number to participate in the competitions, thereby greatly widening the influence of the project as a stimulant to the production of high quality seed grains.

The work of the junior seed grain clubs throughout the province will be linked up with the district seed fairs by having the efficiency winners of the junior clubs brought into their respective district fairs for special competitions.

It has been decided also to hold agricultural short courses in conjunction with the district exhibitions. These courses will be entirely educational, particularly in the subjects of farm crops and culture practices, but dealing also with live stock subjects. Lecturers from the university and provincial and federal departments of agriculture will be available at the time will be asked to contribute to the programme of these courses.

It is the plan to have the organization of each district seed fair placed in the hands of the district agriculturist or some sponsoring organization such as an agricultural society or board of trade who will accept the responsibility. In this way it is hoped to obtain the full co-operation of the community and business interests of the respective districts in making the events a success.

Announcement regarding dates of the district fairs will be made later.

Lethbridge Experimental Farm Activities

Weekly Letter Dealing With the Fall Work on The Farm

In the period before freeze-up work on the farm divides itself into those things that have to be done and those things we would like to do.

A walk around the Station these days finds the foreman very anxious to get all ploughing done on irrigated land, and it is very noticeable that moisture received recently has put the land in good condition for this work. Those irrigated fields which are likely to drift are being ridged. Every advantage is being taken of the favorable soil conditions to get all this work done as soon as possible.

Repairing of fences, corrals and buildings is a pleasant job while the weather keeps fair, but there is nothing more uncomfortable than hammering nails when the weather is cold and there is snow on the ground. Colony houses for hogs are being cleaned and banked with straw, and a general clean-up is in progress around the buildings.

The poultryman is busy cleaning up his houses. After shovelling out old litter he scrubs the walls and floor with a solution of lye; one can to a gallon of cold water. An old broom is used for this purpose since this lye wash must not come in contact with the hands or face. The roosts are painted with nicotine sulphate about 15 minutes before dark. When the birds go to roost the heat from their bodies causes fumes to develop from the nicotine sulphate, and these fumes are deadly to any lice which might be present on the birds. Care is taken to see that all birds are on the roosts. Clean birds in a clean house is the first requisite for egg production.

It may be well to suggest that while the past summer's work is still fresh in mind, a note be made of any needed repairs to implements. That hay wire which served in a pinch might let you down in a hurry when the rush of spring work comes. The important working parts of each implement should be carefully inspected for necessary replacements.

Don't forget to attend the Corri and Seed Fair at Lethbridge on November 8th and 9th, and if you have any promising material you still have time to clean it up and compete with your neighbors.

CANADIAN BARLEY

In view of the renewed interest in Canadian barley as one of the best feeds for many classes of live stock, a definition of the terms used with reference to grades mentioned in the Canada Grain Act, 1930, is not without point. Damp barley means barley containing over 17 per cent of moisture and according to the regulations cannot be graded higher than No. 3 Canada Western barley, artificially dried or not. No. 3 Canada Western may be said to be the principal grade for feed barleys, the higher grades of six-row and two-row barleys being used by the malting trade. In the feed grades, with the exception of the lowest grade, No. 6, it is absolutely necessary that the barley must not be heated or musted. Heated barley and musted barley in fact like most of the various causes of unsoundness, may be detected by sight. The heating of barley, whether caused by wet or by fire, shows a brown discolouration of the kernels. The heating may also be self-evident by the odour of mustiness if caused by damp, or by smoke or cooking if from heat. In musted barley the musty odour is pronounced and may be accompanied by excessive dust, evidence of being stored in an excessively moist state. Artificially dried grain is barley that has contained too high a moisture content and is therefore artificially dried. As the drying is usually done at terminal elevators, the actual operation does not come within the purview of the grower or shipper.

Election Reflection

So far as the grain trade of Canada is concerned, it may be regarded as fortunate that the federal election is getting to the stage of past history. Political uncertainties have a most unsettling effect on the market, especially where the future of the industry is thrown directly into the political arena, as a leading topic of discussion. Without any thought of entering into a political argument, it may safely be said that the election results in the Western provinces, certainly in Manitoba and Saskatchewan, disclose that the wheat policy enunciated by the outgoing government was not approved in many of its essential features by producers as well as by other sections of the community.—Grain Trade News, Sat., October 19, 1935.

"SALADA" TEA

To Settle An Issue

There are few people in Western Canada, and in the east as well for that matter, who will not follow with lively interest the proceedings before the Royal Commission appointed by the Saskatchewan Government to inquire into all the circumstances surrounding the "On to Ottawa" trek of relief camp strikers, which started out from Vancouver this summer and culminated in the Dominion Day rioting in Regina, in which a city police detective lost his life and scores were injured.

The inquiry, which is to be held in Regina may be regarded as an event of major importance to the whole country, in view of the fact that charges have been made public that the purpose and intent of the movement was to upset the constituted government of Canada and to impose on the country a government by unlawful means.

This has been denied by the strikers' leaders, who have insistently declared that their purpose was peaceful and inspired only with the desire to draw their grievances to the attention of the Federal government and the people in the hope that by this means these grievances would be remedied.

Which is correct, the charge or the denial, the people at large have no means of knowing at the present time, but it is sincerely to be hoped that sufficient evidence will be brought before the Commission to settle the question definitely one way or the other.

The charge, of course, is a serious one, since, if true, it involves a serious threat to the democratic form of government which has been bequeathed to the people of Canada and has been carefully fostered and cherished by them since Confederation. The whole trend of the history of the country since that date has been to bulwark and strengthen that form of government which decrees that at periodic intervals the people of the country shall decide by their ballots at the polls what administrative policies they desire.

On the other hand, if there is no truth in the charge, the public is entitled to know it. During their advance through the provinces of British Columbia, Alberta and Saskatchewan as far as Regina, the young men making their way towards Ottawa, gained a measure of sympathy and support from a section of the public.

Those who assisted the lads on their trip to the capital in the belief that it was a peaceful delegation to supplicate the government to terminate certain grievances, whether those grievances were real or fancied, will want to know whether their confidence was misplaced or not.

These young men who joined the movement in a spirit of youthful adventure as the strikers progressed through the western provinces, as is alleged many of them did on the assumption that it was a peaceful and law-abiding pilgrimage, will also want to know whether they were bound on an innocent quest or were unwitting and pliable tools in the hands of a menacing leadership, as has also been alleged.

These are matters which should be cleared up definitely and finally for the sake of the peace of mind of the public generally and for the information of participants in the march and of those who sympathized with them and aided them.

There is only one way, however, for these questions to be definitely determined and that is by all those who have specific information on the movement and its motives to come forward and offer their testimony without fear or favor. Such information, no matter what it may be, provided it is reliable, will, it is safe to say, be welcomed by the Commission and the public.

It must be borne in mind that the Commission is purely a fact-finding body. It is not charged with the duty of drawing conclusions from the evidence adduced, or of making recommendations as a result of the information it receives.

The Commission's duties are confined to bringing out whatever facts they and their counsel may be able to secure and, while, no doubt, every effort will be made to gain as much information as possible, the value of the Commission's work to the public will be limited to the extent that such information is made available.

If those who have important information on the subject matter of the inquiry, neglect to bring it to the Commission's attention, to that extent the investigation will necessarily fail to fulfill its full purpose and to that degree the inquiry will be disappointing.

No matter how economically handled a Royal Commission inquiry is bound to involve considerable expenditure and it is to be hoped that those who have information of value will submit it and help the public to secure a good return for the expense entailed.

Prime Minister Joseph G. Coates announced completion of arrangements with Pan American Airways for service between the United States and New Zealand. The service is understood to be scheduled for initiation next August with flying boats.

The Aztec used chocolate beans for money, and only the upper classes were permitted to drink chocolate.

Prominent Writer Dies

Frank Yeigh Was Authority On Canadian Affairs

Widely known as a lecturer, writer and authority on Canadian affairs, Frank Yeigh, 75, died in Toronto after a brief illness.

He was born in Burford, Ont., and was educated at the public school there. After a period of secretarial and publishing training in Chicago he came here in the late 70's and became secretary to Hon. A. S. Hardy, first provincial secretary and later Ontario premier.

Latest as home editor of the weekly newspaper, Canadian Advance. He married Kate Westlake, author of "A Specimen Spinner," in 1892. She died in 1906.

In 1908 he married Annie Louise Laird, daughter of Rev. Robert Laird, of Kingston. He travelled through the British Isles and Europe in succeeding years and in 1920 became Canadian representative of the Save the Children Fund, an international organization sponsored by the League of Nations aimed at relieving distress among women and children.

"WOULD NOT BE WITHOUT SASKASAL"

SAYS REGINA WOMAN

Indigestion Gone, Can Eat Anything

Read this letter: "For several years I had been troubled with indigestion and could eat very few foods which agreed with me. A friend of mine suggested that I try Saskasal, which I did, and it has entirely relieved me and now I can eat anything. I would not be without a bottle of Saskasal in my home, and I hope others may benefit as I have done when they know of your remedy in Saskasal." For indigestion, biliousness, and acidity of the blood take one or two capsules after each meal for 10 weeks' treatment, 60c.

Bracho-Busting Champion

Pete Knight, Of Alberta, Wins Laurels At New York

Pete Knight, star cowboy of Crossfield, Alta., added the broncho-busting championship of Madison Square Garden, New York, rodeo to the galaxy of honors that already rest in his tack-box.

When the curtain fell on the wild west contest, Knight had 3,497 points in the saddle riding class. He was closely preceded by another Albertan, Herman Linder of Cardston, who amassed 3,466 points during the fortnight's competition.

Extensive Travelling

Journalist Covers 1,250,000 Miles, Always Going Eastward

A man has come to Durban, Natal, who is 22 days younger than any man of his age in the world. He is Mr. M. Franklin Kline. Eleven years ago he set his face to the sun and he has travelled towards it ever since, completely looping first the Northern and then the Southern Hemisphere every year. He has thus been round the world 22 times in 11 years, and, as he has always travelled east, 22 days have been clipped off his life. "I've travelled 1,250,000 miles in my life, always east," he said, "and have never grown tired of it. There are too many interesting things to see. Anyway, I guess I'm wound up now and can't stop. I'm the editor and compiler of the official guide for shipping and travellers to the principal ports of the world, which is published by the Osaka Steam Navigation Company, Japan. I visit all the big ports of the world every year, meet the heads of business firms and interview them. I spend all my time in ships, writing and compiling my guidebook, which is published every year. I was born in Tennessee. I came to South Africa in 1904 and found a job in the mines. When the Zulu rebellion broke out in 1905, I joined up with the Transvaal volunteers. It used to be real fighting in those days." Mr. Kline became a journalist after the rebellion, and when in Japan he conceived the idea of issuing a shipping guide-book as a means of travelling round the world. This was so successful that he has continued travelling ever since.

Requests For Dionne Bowls

Premiums Have Been Given To People All Across Canada

That the Dionne quintuplets are loved by the hearts of the people of Canada is amply demonstrated in the tremendous demands for the "Quint" souvenir bowls being given away as premiums in connection with Quaker Oats. Although the premium offer was first made only a comparatively short time ago, already literally thousands upon thousands of requests for the bowls have been received from families all over the Dominion. Requests for premiums according to The Quaker Oats Company, come from people in every walk of life, high and low, and from both men and women, as well as children.

The premium offer of chromium bowls, a reproduction of the heads of the five famous babies in the intaglio on the bottom, and their names carved around the rim, is being made to mark the fact that Quaker Oats was chosen by the best food experts in the country as the best cereal for the children. The Dionne Quintuplets have been eating Quaker Oats regularly since their very earliest months. Quaker Oats is chosen because of its "remarkable richness in Vitamin B. Food editors of leading publications are of the opinion that it is, stressing the importance of this vitamin. They also recommend oatmeal because of its abundance of body-building ingredients: muscle-building protein, and energy-making carbohydrates. So the "Quints" get bowls of Quaker Oats.

Flying Torpedo Boats

War Instrument Capable Of Sinking Biggest Battleship Afloat

Just as Germany startled the naval world in 1930 with "Vesepocket" cruisers, she has again, after five years of intensive experiments, given a new surprise in vesepocket torpedo boats—variously called death boats or flying torpedo boats because of their tremendous speed and flexibility. Carrying two torpedo tubes and capable of sinking the biggest battleship afloat, these "mosquito boats" of 200 tons reach a speed of 65 miles an hour. For defence against the giants of other navies, they rely on this terrific speed, not armament, as they dart forward under cover of smoke screens, the technique demonstrated at the Battle naval manoeuvres.

Early erroneous reports claimed that the vesepocket torpedo boats were manned by a crew of only five men; a "suicide crew" whose object in war would be simply to dive their little craft, loaded with explosive straight into enemy battleships, taking their chance to survive by leaping overboard at the last minute. The United Press ascertained, that the crews actually number 22, eight on deck, eight in the engine room and six officers.

A Boston woman having married seven times, says the perfect man does not exist. She's easily discouraged.

The man-of-war hawk, or frigate birds, have wings with an extent of seven feet or more.

Cut poppies keep best if floated on lukewarm water.

Japan has not yet introduced chain drug stores.

Here We Are Again!

Yes!... wise "roll-your-owners" are back again with Ogden's Fine Cut. Why not do the same and smoke the best there is, when it costs so little!

Illuminated Highways

Cars Without Lights—Traffic Signals Received By Radio

Illuminated roads, on which motor car lights would be unnecessary, were envisaged by A. E. V. Robinson, deputy secretary of the ministry of transport, at a combined session of the engineering and psychology sections of the British Association, which mainly dealt with road traffic problems.

"It may be that within the next decade, on all the more intensely trafficked roads, the approaching driver will see an oncoming vehicle, not as a couple of spots of dazzling light with a black background, but as a dark silhouette against an adequately illuminated background," he said.

The advances of recent years were still all dependent for their efficacy upon their visual perception by the driver of a road vehicle and his readiness to respond.

"The road driver of the future may hear traffic signals on his car radio set," said Mr. Robinson.

Grasshopper Menace

Infestation For 1936 Believed To Be Higher In Manitoba

Indications of grasshopper infestation for 1936 are much lighter than for many years, Dr. R. D. Bird of the Dominion entomological laboratory, Brandon, Man., told the Manitoba grasshopper control committee in Winnipeg.

The areas of heaviest infestation, according to indications of egg deposits in the soil, are in patches south and southeast of Winnipeg, said Dr. Bird, who has just completed a survey of egg beds. Lighter infestation is indicated over a wide section of the southwestern part of Manitoba.

The corn-borer is able to subsist upon all herbaceous plants and has already been recorded as feeding upon no less than 167 kinds of plants in the United States.

WHAT TO DO ABOUT "Acid Indigestion"

A WAY THAT RELIEVES THE CAUSE IN A FEW MINUTES

Many people who think they have "weak stomachs" or "indigestion," doctors say, suffer in reality from nothing more serious than acid stomach. And this common ailment can usually be relieved now in minutes. All you do is take familiar Phillips' Milk of Magnesia after meals. This gets to almost immediately neutralize the stomach acidity that brings on your trouble. You feel like a new person.

Try this just once. Take either the familiar liquid "PHILLIPS'" or the new Phillips' Milk of Magnesia Tablets. But watch out that you get the Genuine PHILLIPS' Milk of Magnesia. Made in Canada.

PHILLIPS' Milk of Magnesia

THE SECRET OF SUCCESS IN MAKING Bran dishes

IS TO USE

NATURAL BRAN

IF you've never used QUAKER NATURAL BRAN—you don't know how delicious bran, muffins, cookies, etc., can be. For Quaker Bran is especially intended for baking. Because it is a natural bran—it gives you that real bran flavour, mixes well and rises lightly. And it is more economical to use than prepared brans.

Quaker Natural Bran, besides making delicious muffins, cakes, etc. corrects constipation and helps you keep well. There's a recipe folder and a valuable coupon in every package.

QUAKER

Natural Bran

ESPECIALLY ECONOMICAL FOR BAKING

TRY THIS SUGGESTION for a delicious, non-fattening luncheon dessert

Bran Scones Sliced-Pineapple Tea or Coffee

Look for the Quaker Natural Bran display at your grocer's. He has all the things you need for this slimming, retasting in dessert. The recipe for Bran Scones is in the package.

Do You Ever Wonder

Whether the "Pain" Remedy You Use is SAFE?

Ask Your Doctor and Find Out

Don't Entrust Your Own or Your Family's Well-Being to Unknown Preparations

THE person to ask whether the preparation you or your family are taking for the relief of headache is SAFE to use regularly is your family doctor. Ask him particularly about "ASPIRIN."

He will tell you that before the discovery of "Aspirin" most "pain" remedies were advised against by physicians as bad for the stomach and, often, for the heart. Which is food for thought if you seek quick, safe relief.

Scientists rate "Aspirin" among the fastest methods of relieving the relief of headaches and the pains of rheumatism, neuritis and neuralgia. And the experience of millions of users has proved it safe for the average person to use regularly. In your own interest remember this:

"Aspirin" Tablets are made in Canada. "Aspirin" is the registered trademark of the Bayer Company, Limited. Look for the name Bayer in the form of a cross on every tablet.

Demand and Get "ASPIRIN"

Toronto To Be Quiet

Toronto citizens have many ideas toward the elimination of noise that disturbs their sleep. Action proposed by citizens included rubber shoes for milkmen, rubber hushers for milk bottles, rubberized wheels for street cars and a soft composition street car track.

India has a rural-uplift campaign.

Author Of
"One Wide River To Cross"
"The Unknown Port", Etc.

SYNOPSIS

Nancy Nelson is a sub-teen, a gay, irresponsible girl of nineteen, with no care beyond the choice of her costume for her coming-out party. Suddenly, in the market crash, her indulgent father loses all he had, and his family is faced with the necessity of a simpler method of living. At this juncture a letter is received from an eccentric relative in Colorado, who offers the girl a home on what seems to be impossible conditions.

After much consideration Cousin Columbine's offer is accepted, and Nancy and Jack arrive at Pine Ridge. Nancy set out one afternoon to climb to the top of a hill so as to obtain a view of the surrounding landscape and miss the path Aurora Tubbs had told her to follow. A truck comes along the road, driven by Matthew Adams, and she asks him which way to go. They ascend the hill, look around, and then go on to Cousin Columbine's. There Mark Adam tells Nancy that his brother Luke has broken his leg, and that she and Jack have been hired to help out while Luke's leg gets better. With Jack away, Nancy finds that she is lonesome, and having no books to read, the idea of starting a public library at Pine Ridge seems a good one, and Nancy writes home to get her parents to send all the books they could spare and all they could induce others to let them have.

Nancy's parents and friends gave their liberal support to her request for books, and a sizeable box arrived in due course. Father Adam pointed to the sign for the library, and the Adam boys worked on the shelves for the books and decorations to make the room look presentable.

Jack Nelson, Matthew Adams, and Nancy go to the prairie home of Matthews' uncle for the ride, and after Nancy and Jack leave for home, they are caught in a blizzard. Blinded by the swirling snow they collide with a team full of school children, which was stalled across the road with its back wheels resting in a snow-filled gully. Their car being wrecked, Jack and Nancy stay with the children and do all they can to help. The next morning Jack sets out for help in the blizzard. He succeeds in finding help, and the party of children and Nancy are rescued. As a result of the exposure Nancy's feet are badly frozen and Jack is seriously ill with pneumonia, but both of them recover.

Now Go On With The Story

CHAPTER XII.—Continued

"The same, lady—or one branch of it anyhow; and after last night's rain the brooks and rivers will be full. You'll lose your mind over the road ahead, Nancy."

Mark was right. They followed a mountain stream bordered by giant firs and quaking aspens. The mountains were greener here. "More friendly," observed Nancy. "More like New England." And after a camp-fire lunch, they went for a time at South Park—Bayou Salade, they called it then? asked Matthew.

His father nodded, and went on: "I wish I could recall something one of our western poets wrote about him. It says:

"Alone through dusk he sat—
Safe in Bayou Salade above the Plate,
Safe from the rumbling dust that
Sante Fe,
Cool in the woven spruce that
curtain day.
While . . ."

John Adam paused, unable to remember further, and to the surprise of every one, Matthew, dreamy eyes watching—the river, continued:

"While good Pancho browsed
along the sage
Beyond the picket line, it was an
Oricket firs,
Bristled beaver-tail was good.
Better than dripping hump-risks,
—colder was
Was sweet in dapping, snapping,
crackling bright—
Alone, the boy, Bayou Salade,
and Night."

There followed a moment of appreciative silence as Matt ceased speaking. Then Luke exclaimed with admiration: "Gee! brother how'd you ever remember that?"—while Nancy, realizing that with this honest praise Matthew's self-consciousness had returned again, tactfully drew attention away from him by asking:

"Did any of those old, old Spanish expeditions come this way?"
"I couldn't say, my dear," responded Cousin Columbine. "They may possibly have passed near Pine Ridge, though that, I believe, has not been proved."

And no one dreamed that the girl who sat there, lost to the present in visions of other days, was to discover what looked astonishingly like the missing proof.

CHAPTER XXIII.

It was on the fourth of July when Jack announced at breakfast that with their departure only two days away, the time had come to tackle the sagging gate posts.

"You can't put 'em off another hour," he insisted (when the old lady said: "Both those posts, Jack. Don't waste your strength on 'em"). "I'm two pounds heavier than before the blizzard, Cousin Columbine, thanks to these many days and Aurora's cooking; and those posts give me the heebie-jeebies. If there were time I'd paint the house for you too."

"You may have that to look forward to when you come again!" she responded, endeavoring to speak briskly. "I hope your father will consider John Adam's offer of a job for the winter, Jack, and send you back to us. As for Nancy—I don't dare think how still the house will seem without her. I felt like a lost soul the days you stayed at Prairie Ranch."

For the visit to "Uncle Tom's" was over—three days that had softened the memory of those cruel, windswept plains, leaving instead a vision of flower-dappled prairie.

"If it weren't for this stack of newspapers and letters," Nancy confessed the day she stowed them in her trunk, "that whole ghastly experience would seem a dream."

"A nightmare, I'd call it," corrected Aurora. "Victor Tubbs says I lost ten pounds during that blizzard; and as for Miss Columbine, she'll never be the same woman again. It's my opinion that if Eve and John Adam hadn't took their lives in their hands and drove down here to keep her company, she'd have lost her mind."
"And it's my opinion," retorted Miss Columbine, who had come in unobserved, "that you were in a lot more danger of losing yours than I. Don't talk nonsense, Aurora Tubbs."

Nancy laughed at the time, even though something told her that in a measure Aurora was right. One pays toll for hours like these, and Cousin Columbine had not escaped. The old lady was a shade less brisk, less energetic; and Nancy hated to think how lonely she would be when left with only Aurora Tubbs for company.

"If I were twins, or could be in two places at once," she confided in General Grant as she undressed one night, "it would solve the difficulty. What's the use of being a general, anyway, if you're incapable of advising me, Ulysses S.?"

But if the General saw a solution of the problem, he kept it to himself; and the days passed with Cousin Columbine looking a bit grim when she thought no one noticed, and Matthew Adams losing his appetite to an extent that alarmed his troubled mother. And now tickets and reservations were ordered. Mary Taylor had promised (with Luke's assistance) to watch over the Aladdin Library; and Nancy was conscious of a new sensation, something she described to herself as "a sinking feeling down inside," each time she caught a glimpse of the unasked question hovering mutely, hopelessly, in Matthew's expressive eyes.

Now is the Time For This Help in Preventing Colds

Formula Especially Designed to Aid Nature's Defenses in Nose and Upper Throat, Where Most Colds Start. PART OF COLDS-CONTROL PLAN

Don't wait for a cold to develop before you get down. After any unusual exposure, head that gives warning nasal irritation or sneeze—apply a few drops of Vicks Vapo-rubol on each nostril. Used in time, Vapo-rubol helps to avoid many colds.

Vapo-rubol is especially designed to aid and gently stimulate the functions provided by Nature—in the nose—to prevent colds, and to throw off head colds in the early stages. Where irritation has led to a congested nose (a stuffy head cold or nasal catarrh) Vapo-rubol—applied through the nasal passages—reduces swollen membranes—clears clogging mucus—brings comforting relief.

For Fewer and Shorter Colds. Note for your family: Vicks has developed, especially for home use, a practical Plan for Better Control of Colds. This commonsense guide to fewer and shorter colds has been brought about by practicing physicians and further proved in everyday home use by millions. Full details of Vicks Plan come in each Vapo-rubol package.

MODERN DESIGNS GIVE GREATER EFFICIENCY!

a 1935 streamline model and you'll marvel at the advances in motoring pleasure.

RIDE THE AIR WAVES FOR TEN MINUTES with an Eveready Layerbilt hooked to your radio receiver, and you'll enjoy the same delightful sensation of scientific achievement.

Space-wasting round cell construction has gone into the discard. Today, flat cells compactly built layer upon layer, bring you a modern power plant, packed with sustained energy and long life.

Study the comparison below, then make sure of gaining this new and greater measure of radio enjoyment.

Old-Fashioned Round Cells

Note the wastage and the multiplicity of delicate wires.

MODERN Layer Construction

Not an inch wasted—layer tightly packed on layer—the maximum of power and long life—the minimum of trouble.

So she was relieved when Jack mentioned the neglected gate posts. The task would occupy both time and thoughts till afternoon, when they were to have a farewell supper at the Adam ranch.

"Don't worry about Jack," she said to Cousin Columbine. "I'll help with the digging. Let's get to work before the sun's too hot."

The old posts, rotted at the bottom, were of little difficulty.

New Era in Plane Travel

Stratosphere Ships To Travel Above Clouds At Terrific Speeds

Designers of Britain's next air mail, the stratosphere aeroplanes, hope that it will reach a height of at least 50,000 feet, and travel at speeds equal almost to the 340 miles an hour achieved in the last Schneider Trophy race.

These features are the official aims of the air ministry for the special aircraft being built by the Bristol Aeroplane Company at Bristol.

Details of the machine's design are being kept secret, but the expected performances were made known recently.

This craft may be the forerunner of a new era in long-distance travel.

Although balloon ascents have been made to the stratosphere, no aeroplane has carried out any satisfactory tests there. But it is believed that once a machine and engine can be built to reach the necessary height—eight or nine miles up—remarkable speeds will be achieved.

Storms are unknown in the stratosphere and balloonists who have been there report that they never sighted a cloud.

Not only must the engine be super-charged, but the hermetically sealed pilot's cabin must be kept at sufficiently high air pressure to enable a man to live in the rarefied atmosphere.

According to the latest estimates there were 55,700,000 sheep in North America in 1934. Canada had 3,400,000; the United States 52,260,000, and Newfoundland 100,000. In 1933, the number of sheep in the world was estimated at 688,300,000. 2123

Accidental Discovery

Explosive Discovered Valuable Because Of Cheap Chemical Ingredients

Discovery of a new explosive of "high shattering power" in the remnants of a laboratory experiment which "went wrong" was announced by Professor A. T. Bayden, head of the College of the Pacific Chemical Department at Stockton, Calif.

The explosive, Professor Bayden said, had proved of considerable commercial value because of its cheap chemical ingredients. Last year, he said, a minor classroom explosion resulted from an experiment which had been performed successfully hundreds of times before. Seeking conditions causing the blast, Professor Bayden and a group of students made the discovery.

British Eggs By Air Mail

Eggs Delivered From England Were Hatched In Australia

An experiment in sending British eggs by air mail to Australia, to be hatched by Australian hens, has proved a great success, as two sturdy Rhode Island chicks hitherto unknown in Australia prove. Mr. F. P. Finney, assistant secretary of the poultry club of New South Wales, received two settings of Rhode Island Red eggs by air mail. They were despatched fifteen days earlier by Lord Greenway from his farm at Stanbridge Earls, Romsey (Hampshire). The two chicks hatched out 23 days after receipt.

Autograph Collector

A Belgrade man who has been wandering about the world for the past twenty-five years collecting autographs, now has about 20,000 signatures. He is Mirsad Raitichewitz, and he has visited Europe, Siberia, China, Japan, India, Persia, Palestine, North and South America, Australia and New Zealand. The hardest signature to get, he found, was that of Mahatma Gandhi; the easiest that of President Roosevelt.

THE CHINOOK ADVANCE

Published by Mrs. M. C. Nicholson every Thursday afternoon from The Advance Building, Main Street, Chinook, Alberta, and entered in the postoffice as second class mail matter. The subscription rates to The Advance are \$1.50 per annum in Canada and \$2.00 outside of Canada. The transient advertising rates in The Advance are—display, 40c per inch for first week and 30c for each succeeding week, providing no change is made. For heavy composition an extra charge is made for first week. Reading notices, 10c per count line. Legal advertising, 15c per count line for first week and 10c for each succeeding week. Cards of thanks, \$1.00.

Advertisements under this heading are charged at the rate of 50c for 25 words or less per week, with 10c for each additional 5 words. Three weeks for the price of two. All letters addressed to the editor for insertion in The Advance, must be signed to show bona fides of the writer. Publication in all cases is subject to the judgment of the Publisher. We do not necessarily coincide with views expressed.

Predicts Holding Policy

The Canadian Wheat Board will be governed in its operations by political expediency, the Food Research Bureau of Stanford University believes, and will try to make a profit on stocks taken over from the old agency, and a large profit rather than a small one. The Review states: "In view of the external and internal pressure that seems likely to be exerted upon the Board, we suspect that its export policy will lean towards holding rather than dumping."

English Mills Reported Caught Short

According to current rumors, the large English milling companies have been hit by Premier Bennett's move in fixing the price of Canadian wheat at 97½¢ a bushel. Whether the mills themselves are to blame for this action is a moot question. One side of the story is that they deliberately were selling short at Winnipeg, while on the other side it is stated that owing to Winnipeg being the most favorable market in which the English millers could hedge their purchases of Russian and other wheats, their sales might be regarded as legitimate. However, the consensus of opinion seems to be that deliberate short selling was indulged in, under the impression that the new pegged price would be considerably under the old. When this did not come about, English mills got squeezed. While the true facts are not known, there is evidence that the mills have suffered losses, for when flour prices were advanced recently a policy of insisting on buyers paying the full advance was pursued, instead of giving them an opportunity to stock up at the old price, before putting the advance into effect. The shares of the two leading milling companies have declined, and it remains to be seen what dividends they will declare for the year—British Correspondent of Northwestern Miller, Oct. 16.

Serious Seed Situation In Prospect

Damage done by widespread August frost made certain the development of a serious seed situation in Alberta before next spring. Some careful planning will be necessary to spread the available good seed widely, otherwise many farmers are likely to sow poor stuff. As good seed is a fundamental necessity for a good grain crop this matter ranks of first importance. Far-sighted grain growers are already looking ahead to next seeding time and arranging for their seed supply. Only too many grain growers, however, are in a poor position to obtain the quality of seed they would like to sow.

Seed Treatment for Smut

Before any substance can be recommended to farmers for the control of smut in wheat, barley and oats, it must be subjected to field tests under conditions suitable to natural smut infection. During the past five years tests of this kind have been made at the Dominion Rust Research Laboratory at Winnipeg with no less than 37 substances. The results obtained with 16 of these preparations are summarized in the July issue of "Scientific Agriculture." Formalin gave good control of bunt of wheat, covered smut of barley, and the smut of oats. This treatment is relatively cheap, but it is more difficult to apply than the dust treatments, and under certain conditions may cause seed injury. The copper dusts are to be recommended only for treatment of wheat and hulls of oats. In general, they have good control of bunt when the seed was not too heavily contaminated with spores. New Improved Ceresan, an organic mercury dust, was effective in controlling bunt of wheat, covered smut of barley, and the smut of oats. This dust, because of the light rate at which it is applied, should not cause clogging of drills. In certain other experiments, seed treated with copper and mercury dusts gave a higher percentage of seedling emergence than untreated seed.

Rockyford Hotel Burned

Twenty Persons flee In 11 Below Weather

Twenty guests were forced to flee in their night attire with the thermometer standing at 11 below zero when fire destroyed the Rockyford hotel and the adjoining cafe at 6 o'clock this morning.

Several guests were overcome by smoke, but were quickly revived. The building occupied by the Power Company adjacent to the hotel was torn down in order to prevent the flames from spreading, and at noon it was stated that the blaze was completely under control.

Loss will be between \$12,000 and 15,000 with added loss as a result of the destruction of the Calgary Power Company building. Due to the bad condition of the roads it was not possible to receive assistance from the Calgary or Drumheller Fire Brigades, and volunteers were compelled to fight the flames with chemicals and a "bucket line."

Carried to Safety

The fire was discovered at 6 o'clock this morning. It had apparently started below the flooring of the main floor of the hotel. When discovered the lower floor was ablaze and flames were shooting up the walls. The guests were aroused from their beds and several who had been overcome by smoke while asleep were carried to safety. They suffered severely from exposure while temporary accommodation was being provided for them.

The fact that the roofs of adjoining buildings were covered with between six or seven inches of snow prevented these buildings becoming ignited when sparks from the burning hotel landed on them.

The hotel had recently been renovated and furnished. The loss is partially covered by insurance. An attempt is being made to ascertain the cause of the fire.

Monday's thaw was a welcome visitor after last week's winter weather with the thermometer registering as low as 20 below. The thaw started with snow which later turned to rain just like an April shower.

Mr. Jas. Guss of Drumheller visited on Wednesday at the Milligan home.

Mrs. Leonard Cooley who was in the Cereal hospital receiving treatment returned Monday feeling considerably improved.

Miss M. Todd, and Mr. A. Rowland motored to Calgary on Tuesday.

Low Meat Supply in the United States

Reduced numbers of cattle, hogs and sheep in the United States has resulted in rising prices and prolonged complaint from consumers. Observers state that there is still quite a serious deficiency in supplies due to the slaughter of some six million pigs and eight million cattle, partly because of drought and partly through the operation of the Agricultural Adjustment Act. At the same time those who have had livestock to sell obtained much better prices during the current year. President Roosevelt stated the farm income had risen during the past year over 1933 by \$5,000,000,000.

CANNING FRUIT

THE WORLD OVER

Fruit is canned in a large number of countries, although there are unfortunately no statistics for the majority says the Imperial Economic Committee's report on Fruit. The United States and Hawaii (pineapples only) undoubtedly provide the bulk of the world aggregate, and these two countries probably account for more than this remainder of the world put together. Australia and British Malaya (the latter producing canned pineapples exclusively) are the most important Empire producers, but the output of Canada and South Africa is of growing importance. Canning is also carried out in India, and fruit canning industries have been started in Jamaica, Mauritius, Fiji, and Palestine. In Formosa, pineapple canning is assuming considerable proportions, although most of the output is shipped to Japan for consumption in that country. A certain amount of fruit is also canned in Argentina, Brazil and Chile, while Japan has recently started an important orange canning industry.

Taking these countries as a whole, the principal fruits canned are apricots, peaches, pears, pineapples, and grapefruit, although many of them can important quantities of other fruits, including raspberries, strawberries, loganberries, apples (mostly canned in water), plums, and cherries. These fruits, however, are the principal products of the industries of the United Kingdom and continental Europe. A further distinction may be made in that the products of the European canning industries do not play an important part in international trade; fruits are generally canned or bottled for home consumption and exports are small.

An important industry is being built up in Russia where apples, apricots, peaches, pears and cherries are canned. In Germany strawberries are an important item, while the chief Italian product is cherries, with certain quantities of peaches and apricots. Apricots, peaches, plums and cherries are canned in small quantities in Sweden, also in Spain, with the addition of strawberries and pears. Belgium produces canned cherries, plums and pears, and the output of the Netherlands also comprises these fruits with the addition of apricots. However, in the Netherlands very little fruit is canned, production consisting mainly of bottled fruit. As in the case of other European countries, some of the raw material of the Netherlands industry is probably imported. There is also a canning industry in Switzerland where small quantities of a variety of fruits are processed, including strawberries, raspberries, currants, cherries and plums, with apricots and apples. Supplies of home-grown fruit are sometimes insufficient for the needs of the industry and imported fruit is used.

COOLING AND WAX PLUCKING

The necessity for the proper cooling of the bodies of fowl which have been roughly plucked prior to being treated by the wax-plucking method is fully dealt with in the booklet by Dr. N. H. Grace on "The Use of Wax in the Plucking of Poultry." They should be hung in a moderately cool room until the body temperature is very considerably lowered. The time of hanging to cool will vary for different sets of conditions. In a room of average temperature about two hours will be required. In some cases, it may be advisable to extend the cooling a little longer, as the wax peels more readily from cooled birds. In other cases, a period of one hour may be sufficient, but the body temperature should be reduced to about 70 degrees Fahrenheit. The temperature may be readily determined by holding the thermometer between the wing and the body for a brief interval. If the bird is not cooled sufficiently, there is a tendency for the wax to leave smears. Therefore, if smears of wax are noticed, the birds should be allowed to hang a little longer prior to wax treatment. The operator, Dr. Grace suggests, would do well to try various cooling periods with, say, three birds: the best results would set the conditions for the large group to be processed. The booklet is published jointly by the National Research Council of Canada and the Dominion Department of Agriculture.

British Comment on Wheat Situation

The president of the Liverpool Corn Association in a recent public statement said that he had grave doubts as to whether there is or will be "any surplus at all of good sound wheat for the manufacture of flour for human beings," taking into account the possibility of a large part of the United States and Canadian wheat from this year's production being of low grade due to rust and frost which renders it unfit for use except for animal feed.

The London Times suggests that importing nations of Europe are likely to look to Canada during the present cereal year for rather more than half their supplies.

Mr. A. Strand returned from Cereal Hospital Wednesday.

Mrs. Walker, Swail Teachers, left Wednesday evening to attend the convention at Hanna.

Miss Agnes Bunney went home to spend the holiday at the home of her father, J. Bunney.

Ernest Gilbertson spent the week-end in Calgary.

Fred Hobson returned from Red Deer Monday Night.

'The Dance of the Food Fads'

In 1900 the consumption of flour in the United States was 230 pounds per head of population. In 1935 it was 160 pounds per head. This has meant a terrific loss in flour and wheat consumption and U.S. flour mills are trying to reverse the trend, as has been done in Great Britain.

A large flour milling concern in the United States advertises as follows: "While it lasted, the Dance of the Food Fads had more followers than the tango or the Charleston. First you strangled your natural appetite. Then you selected your food by adding up the calories from a list that looked like the closing prices on the stock market page.

"Diet crackers undertook to re-fashion the body lines of the nation. Thin women grew thinner—fat women grew fatter. The number of under-nourished children increased.

"Like Tom Thumb golf, the Food Fads faded out. Calories, vitamins, proteins, violet rays, and the whole tribe of diet mischief makers sneaked home to the long-haired professors who had turned them loose.

"The return to sane thinking and sane eating is under way. Folks are going back to old-fashioned food that is good for them. They are eating more wholesome white bread. Bread is nature's most appealing and nourishing food. The Dance of the Food Fads is over."

It has been demonstrated at the Dominion Laboratory of Plant Pathology at Charlottetown, P.E.I., that potatoes are severely injured by cracking and bruising when poured from a basket into a sack from a height of 30 inches. The injury is slight from a height of 12 inches. Potatoes, therefore, should be

Canadian Potato Crop

Canada's 1935 crop of potatoes yielded 38,345,000 cwt., or about 10,000,000 cwt. less than the 1934 crop. Alberta's potato yield totalled 2,033,000 cwt., compared with 1,837,000 cwt. last year. In this province 29,900 acres were planted to potatoes compared with 32,800 last year.

The Chinook Women's Institute held their regular meeting at Mrs. Rideouts home on Wednesday November 6. Arrangements were made for a tea and Bazaar to be held on December 7.

After the business session the members entertained their husbands at an Alberta dinner. This was held at the school and everything served with the exception of tea and coffee was raised in Alberta. The menu consisted of turkey and chicken, creamed potatoes, carrots and peas, cabbage salad, cranberry and bull berry jelly, buns, pumpkin and gooseberry pie. All did justice to this bountiful repast and afterwards Mrs. Allen took charge of the program. This consisted of songs, a contest dealing with affairs of the day was put on by Mrs. Wilson and Mr. and Mrs. Marcy tied for first prize, a lovely box of stationery.

A recitation by Mrs. Milligan on "An Institute Member" was well received. Mrs. Allen's paper on the topic of "Legislation" dealt with the founding of Canada and the origin of its name. Mrs. Isbister and Mrs. Chapman sang a duet.

Mrs. Marcy's paper on "The pippy and its symbolism" was very interesting.

The roll call "what can women do to further better legislation" was answered by each one. On behalf of the husband Mr. Rideout gave a vote of thanks for the very enjoyable dinner and evening.
